Professional Summary

Quant Developer specializing in high-performance trading systems, C#, .NET optimization, and C++ interop between managed and unmanaged code. Proficient in multithreading, low-level network communication, and real-time market data infrastructure. Experienced in building scalable trading architectures, data pipelines, and performance-critical components for systematic and algorithmic strategies. Known for combining technical precision with a collaborative, human approach to engineering challenges.

Experience

Trade Path Capital LLC

2019 – Present [6 Years]

- Quantitative Developer (Nov 2024 – Present)
 - Designing and evolving high-performance trading infrastructure and financial models using C#, .NET, and unmanaged C++ interop.
 - Led a major rewrite of the firm's trading stack to improve scalability and enable expansion into Indian, Crypto, and FX markets.
 - Integrated SignalR for real-time market data streaming to web dashboards.
 - Engineered memory-mapped files and blittable structs, reducing memory usage by ~80%.
 - Collaborated with cross-functional teams while leading an engineering group translating investor and product requirements into robust technical solutions.
- Quantitative Developer (Nov 2023 – Oct 2024)
 - Designed and implemented financial models leveraging C# and .NET for quantitative strategies and risk management.
 - Translated complex quantitative theories into efficient, scalable systems. Built and optimized trading models using OOP principles.
 - Developed tools for quantitative risk analysis and management.
 - Enhanced system performance through strategic thinking and hands-on coding.
- Stock Market Analyst for Strategies (Jul 2022 – Nov 2023)
 - Conducted daily data analysis using progressive and non-progressive time features.
 - Generated pivot-based insights comparing symbols against benchmark indices.
 - Supported strategy development through curated datasets and market pattern detection.
- Cloud Architect Engineer (May 2022 – Jul 2022)
 - Developed and deployed a dynamic system for cloud-based trading migration.
 - Reduced operational costs by 98.8% while improving support efficiency.
- Market Data Streamer (Mar 2022 – Apr 2022)

- Published real-time stock market tick and quote data consumed by hundreds of clients with <10ms delay.
- Built reliable streaming architecture for distributed systems.
- Stock Scanner & Screener (Jan 2022 – Mar 2022)
 - Mentored in the development of a stock scanner tool analyzing results and generating pivots based on feature selection.
- Software Engineer (May 2021 – Jan 2022)
 - Developed trading strategies and pipelines for live and backtesting environments.
 - Built Python-based visualization and analysis tools for market scanning.
 - Created scanners with complex filters for NYSE stocks.
- Software Developer (May 2020 – Mar 2021)
 - Developed multiple Python and C# projects handling large-scale financial datasets.
 - Built pipelines to download, verify, and clean historical market data (tick, quotes, fundamentals, EOD, minute, ETF, daily).
 - Automated verification reports for data accuracy and consistency.
- Intern (Nov 2019 – May 2020)
 - Gained foundational knowledge in C#, Python, and OOP through project-based learning.
 - Assisted in development and debugging of in-house tools.
- Western Digital – Internship (Mar 2018 – Apr 2018)
 - Assembled systems, installed OS, and managed custom software installations for clients.
 - Learned to interpret client requirements and deliver tailored solutions.

Education

- Bachelor of Engineering in Electronics and Telecommunication – M. H. Saboo Siddik College of Engineering, Mumbai (Jun 2020 – May 2023)
- Diploma in Computer Engineering – M. H. Saboo Siddik Polytechnic, Mumbai (May 2016 – May 2020)
- S.S.C – Dawoodbhoy Fazalbhoy High School (Mar 2015 – Apr 2016)

Accomplishments

- UrbanDB – REST API built using Flask Framework for data operations via Google Sheets.
- SBEUIA – Voice-command-based intelligent assistant capable of autonomous tasks.
- Github-Trend-Recorder – Web scraper tracking daily trending repositories on GitHub.
- Github-Trend-Recorder-API – API (Flask/FastAPI) providing real-time and historical trending repository data, supporting spoken language, code language, and date range filters.
- Shop Management System – Console app for managing customers, bills, inventory, and payments.
- Multiple Android and Web-based projects including KQCMM, MHSSP, MessageIT, and PicIT.

Skills

- Languages: Python, C#, C, C++, Java
- Frameworks & Tools: .NET, Flask, FastAPI, ASP.NET, SignalR

- Specialties: Multithreading, Low-Level Network Communication, Real-Time Systems, Code Profiling, Performance Optimization
- Other: Android Development, API Design, Video Editing, Identifying Bottlenecks. Photo Editing

Interests

- Exploring trending open-source projects on GitHub.
- Following cutting-edge technical blogs and research in software development
- Learning and experimenting with ethical hacking and cybersecurity
- Exploring AI technologies, frameworks, and emerging applications in the AI ecosystem
- Reading daily tech and trading news, market insights, and related articles
- Optimizing code performance and low-level system programming.

Declaration

- I hereby declare that the information provided is true and accurate to the best of my knowledge and belief.
