

Career Objective:

My sincerity and positive approach toward work will help me to stay in the Company. Moreover, my punctuality will aid me to complete my task within time. These things would help me to create a good impression of mine within the company.

Experience:

Trade Path Capital LLC

Quantitative Developer	Nov 2024 – Present	Designing and evolving high-performance Trading Infrastructure and Financial Models using C#, .NET, and interop with Unmanaged C++ to support Quantitative Strategies, Risk Management, and Real-Time Market Data. Over the last year, I've led a major rewrite of the firm's trading stack to meet investor expectations and enable expansion into Indian, Crypto, and FX Markets. Key Contributions: • Led the redesign of the Trading Engine, Strategy Engine, Indicator Engine, L1 Data Pipelines, and Scanner Dashboards for Scalability and Modularity. • Integrated SignalR to stream Real-Time Market Data from our Servers to Web Dashboards. • Built and optimized the ASP.NET on top of .NET backend for client and internal web tools (stack selection, API design, performance tuning). • Implemented C# ↔ unmanaged C++ interop (unsafe/marshalling) for latency-sensitive components, allowing efficient processing of large L1 trade/quote feeds. • Engineered memory-mapped files and blittable structs to cut real-time memory usage by ~80% and support multi-market execution from a single server. • Collaborated with cross-functional teams while leading an engineering group, translating investor and product requirements into robust technical solutions.
Quantitative Developer	Nov 2023 – Oct 2024	The focus has been on designing and implementing financial models leveraging C# and the .NET Framework to support quantitative strategies and risk management. This work involves translating complex quantitative theories into efficient, scaleable solutions, all while ensuring effective communication within cross-functional teams in a hybrid setup. • Responsibilities include building and optimizing trading models using C# and OOP principles. • Tools have been developed for quantitative risk analysis and management. • A strong emphasis is placed on maintaining precision and efficiency with attention to detail. • Collaboration with diverse teams has been essential to delivering impactful solutions. • Strategic thinking is combined with hands-on coding to enhance system performance.

Stock Market Analyst for Strategies.	July 2022 – Nov 2023	• Over a five-year period, we gathered the curated data. • Producing the Output Pivots. • Daily data analysis using both progressive and nonprogressive time features. • The Max Min Average Movement and Estimate of Each Symbol in Comparison with the Index Symbol are Included in this Study
Cloud Architect Engineer.	May 2022 – July 2022	• Pioneered the development and deployment of a dynamic system, resulting in significant cost savings and streamlined troubleshooting for traders migrating to the cloud. • Innovated the migration of traders to a cloud-based environment, boosting technical support efficiency. The Cost was reduced to 98.8%
Market Data Streamer.	Mar. 2022 – Apr. 2022	• Publishing Realtime Stock Market Tick Data • This Includes Quotes & Tick Data • Data is Consumed by 100s of Clients Computer on Remote via IP Connection in Real Time with <10ms delay.
Stock Scanner & Screener.	Jan. 2022 – Mar. 2022	• Worked as a Mentor to make a Scanner Tool which is Analyzing the Result and Generate Multiple Pivots based on Feature Selection.
Software Engineer.	May 2021 – Jan. 2022	• Working as a Strategy Writer based on Analysis Calculation. • Deploying the Same during Live, Back Testing. • Working on Python Pipeline • Generate File which will be in Use to Visualize Data and Analysis. • Making Scanner to Scan Stocks along with Filters and Market Calculations [NYSE]
Software Developer.	May 2020 – Mar. 2021	• Working on Python Projects • Working on Several Project along with Making Programs Individually using Python as well as C# • Handling Large Amount of Data • Made a Code Pipeline to Download the Historical Tick, Quotes, Fundamentals, EOD, Minute, ETF, Daily etc Data • Handling Download Failure, Generating Verification Report, • Comparing for Size, Count all with code • Cleaning of Data and Generating Stats, that is used by Analysers
Intern.	Nov. 2019 – May 2020	• Here I Gain Knowledge of C# as well as Python, OOP, Along with Working on Projects

Western Digital

Internship.	Mar. 2018 – Apr. 2018	• Assembling of System, • Adding Windows to DOS Laptop • Dealing with Client to Meet their Laptop Delivery with Custom Software Installed • Learn to Understand the Client Requirement
-------------	-----------------------	---

Education:

- M. H. Saboo Siddik College of Engineering, Mumbai
June 2020 - May 2023
Bachelor of Engineering Electronics And Tele Communication
- M. H. Saboo Siddik Polytechnic, Mumbai
May 2016 - May 2020
Diploma Computer Engineering
- Dawoodbhoy Fazalbhoj High School
March 2015 - April 2016
S. S. C

Accomplishment:

- UrbanDB
<https://urbandb.mmapps.in>
<https://docs.urbandb.mmapps.in>
Using Flask Framework, I created REST API that do Create, Read, Get, Post Request to Google Sheet for Fetching Data in JSON Format This can be Useful in many ways such as Database in Android Apps, Website, Deployment, Applications, Many More!
- SBEUIA(Something Beyond Existing Ultimate Intelligent Assistant)
<https://www.youtube.com/watch?v=joMCf63oiBM>
The Bot which can Perform Multiple Task at his Own using Voice Command
- Github-Trend-Recorder
<https://github.com/mehboob-dev/Github-Trend-Recorder>
<https://gtr.mmapps.in>
A Web Scraper that Scraps and Records Daily Trending Repository on Github
A Website Represent Current and Historic Trending Repos from Recorded Data All Parameter are JSON Configurable
- Github-Trend-Recorder-API
<https://github.com/mehboob-dev/Github-Trend-Recorder-API>
<https://gtr.mmapps.in>
An API built with Flask/FastAPI thats Provide Realtime as well as Historical Trending Repository Data/Details. These API currently support Argument of Spoken Language and Code Language to Fetch Data, Date Range.
- Shop-Management-System ConsoleApp
<https://github.com/mehboob-dev/Shop-Management-System>
A Console App which can Perform Multiple Task which a Medium Scale Business Required. This Project can be Able to Add, Search, Update, Delete Customer's, Bill's, Godown, ToDo Details.
Along with this, the Project able to Keep Track of Pending Payments, Customer's Advance, Order Tracking.
- KQCMM (AndroidApp)
Freelance Project for a Community of People.
- MHSSP (AndroidApp)
Here I created an Android App for my College.
- MessageIT (AndroidApp)
Super Alternative of WhatsApp with all Advance Feature available with complete Description.
- PicIT (AndroidApp)
Super Alternative of Instagram with all Advance Feature available with complete Description.
- Mini Projects of
C C++ JAVA HTML & CSS JAVASCRIPT

Interests:

Here is a little about what I like to do in my spare time.

- Exploring Github Trending Section
- Reading Technical Blogs/Article on Platform such as Medium.com/ TowardsDataScience.com
- Learn about Ethical Hacking.
- Surfing & Exploring – Webs & Android Systems

Skills

- ✧ Profiling Code base for Improvement of Code
- ✧ Removing Bottlenecks
- ✧ Aware about Debugging the Blocks of Code
- ✧ Ability to Work with Different Time Across Globe.
- ✧ Video Editing – Sony Vegas
- ✧ Android Based Application
- ✧ Photo Editing
- ✧ Banner & Logo Making

Programming Languages:

- ✧ Python
- ✧ C#
- ✧ C
- ✧ C++
- ✧ Java

Language:

- ✧ English
- ✧ Hindi
- ✧ Urdu

Declaration:

I solemnly declare that the information's given herein is true, accurate and to the best of my knowledge and belief.

Software

- ✧ JetBrains
 - ◆ PyCharm
 - ◆ Rider
 - ◆ Android Studio
- ✧ Turbo C - For C & C++
- ✧ VB v6.0 – GUI
- ✧ Notepad++
- ✧ Visual Studio 2017, 2019 – C#
- ✧ Spyder - Python
- ✧ Oracle – Relational Database Management
- ✧ ANTS Profiler for Profiling C# Code Base
- ✧ Yuppi inline Profiler for Profiling Python Code Bas
